Colispirin
Water soluble powder

COMPOSITION:

Each 100gm contains :

Spiramycin	20 gm
Colistin sulfate	5gm
(Equivalent to 100 M.I.U Colistin)	

CHARACTERISTICS :-

Colispirin -:

- Is the choice medicine against microbial infection of digestive origin without septicemic tendency.

- Has a broad spectrum against the pathogenic bacteria most often met in veterinary medicine : Mycoplasma, E.coli, Salmonella, Pasteurella, Haemophilus, Klebsiella. Bordetella. Streptococci, Staphylococci and Anaerobic bacteria,

- **Colistin:** Is a polypeptide antibiotic that doesn't cross the intestinal wall and remain concentrated in the digestive tract so it is very effective against gram -ve bacteria.

- **Spiramycin**: Belongs to Macrolide family, it spreads in the whole organisms and is fixed selectively in the lungs, it also shows strong activity against Mycoplasma spp & gram +ve bacteria.

INDICATION:

Antibiotic for poultry
Infectious diseases due to gram +ve and gram -ve organisms sensitive to Spiramycin and Colistin.
Prevention and treatment of intestinal Colibacillosis , infectious enteritis in poultry and rabbits.
It is also effective in air sac disease ,CRD complex ,infectious coryza and bacterial arthritis.

Dosage :-

1gm / 4-8 Liters of drinking water for 4-5 days

RECOMMENDATIONS:

-**In** poultry it is recommended to treat continuously in order to obtain a maximum efficiency thanks to a regular concentration in Colistin.

Adverse reactions:-

Gastro-intestinal disturbances may be observed

Precautions :-

Withdrawal period is 7 days before slaughter

Storage:-

Protect from heat and moisture

Packing :-

100 ,200 , 500 GM
