

# Hepamarin

Silymarin 140 mg

## Composition:

Each capsule contains: 140 mg Silymarin extract.

## Properties:

- The liver has several vital functions to perform in the human body: e.g. it plays a dominant role in metabolism (sugar, protein and fats), in digestion (bile secretion) and in the detoxification of waste products.
- Every form of liver damage causes changes in the hepatic cell membrane and in this way impairs the functional capacity of the liver.
- Silymarin, the active principle of Hepamarin, is of plant origin. It acts as a cell membrane stabilizer and has the capability to protect the liver against deleterious agents, which can cause toxic liver disease and to accelerate the regenerative capacity of the damaged liver. These effects are reflected in improvement in general condition, relief of digestive symptoms, improvement of signs of liver disease and normalization of liver function test.

## Indications:

- Toxic liver damage.
- Supportive treatment in chronic liver disease and Cirrhosis.
- Adjuvant in acute and chronic hepatitis.

## Contra-Indications

No contraindication reported with Hepamarin

## Dosage

- Initial dose: two capsules three times daily.
- Maintenance dose: one capsule three times daily.

## Side effects

Occasionally a mild laxative action may be observed

## Packing

Three strips, each contains 10 capsules
